A party of forty-five Armenian refugees, driven from their homes by the Turks last July and supported since by the American Relief Committee at Port Said, arrived in New York this week.

Approximately a billion and a half dollars for new ships and an annual repel the earth toward the sun, or upkeep charge of \$760,000,000 is what Admiral Fletcher, commanding the Atlantic fleet, estimates it would cost to carry out the Navy General Board's recommendation to give America the most powerful fighting fleet in the world by 1925.

ended spectacularly its investigation of riots in January by returning indictments against Judge Elbert H. Gray, chairman of the United States Steel Corporation and six steel companies. The indictments charge conspiring to fix wages of labor and prices of iron and steel.

Despite the perils of submarine warfare 400,000 persons crossed the Atlantic between American and European ports as passengers last year.
Figures assembled in the Bureau of
Navigation show that 250,000 of them
traveled on vessels owned by the belligerents. Slightly more than half the Atlantic travelers were eastbound and Italian ships carried more than the vessels of any other nation. Only 38,000 of the passengers traveled first class. Two hundred and seventy thousand went in the steerage.

#### COULDN'T KILL MULE

"OLD TOBE" NONE THE WORSE FOR LONG IMMERSION.

Incident of the Civil War Shows How Hard It Is to Separate Government Pack Animal From Uncle Sam's Rations.

Z. P. Hotchkiss, adjutant of Phil Sheridan post G. A. R. of Oak Park, Ill., tells the following experience with a government mule. As an army tached to the staff of General Canby in the final Mobile campaign.

"The entire outfit for the construction of the army telegraph lines," says today, At your druggist's Mr. Hotchkiss, "was carried on the Advertisement. backs of forty pack mules. A coil of half a mile of wire hung upon each side of the saddle.

"There were six young operators, one from each corps, mounted on horses. To these boys had been intrusted the government cipher and knowledge of the advance movement of the troops. These secrets were safe, as none of the young fellows ever betrayed a trust

"For the Mobile campaign the mules were drilled in the streets of New Orleans to follow the lead of the muleteer or the horse of the chief opera-

"One day, while following in the rear of the army up the peninsula from Dauphine island, the entire train was trailing along in the rear of the chief operator, who knew nothing about ocean tides. The reel mule, 'Old Tobe,' from whose back was uncoiled the wire, was in advance and followed his leader into an arm of the Gulf of Mexico. The operator's horse was soon beyond his depth and was swimming for shoal water when it was seen that 'Old Tobe' had sunk beneath hiz heavy load. The muleteer swam his borse to where the reel mule had gone down, and after diving twice, came up gasping for breath.

"'The fool critter is walking toward the Spanish fort, he said, but I'll get him this time, sure. He dove again, and with his clasp knife cut the bellyband of the submerged mule and rid the animal of his load. 'Old Tobe' floated to the surface, shook the water from his ears, was towed ashore, pumped out, and a few hours later was again making the march for Fish river. Save for dragging a little, he showed little sign of his experience; but he had been under water long enough to have killed anything but a government mule."

Some 200 army operators, who, though many of their number were killed or taken prisoners of war, are ineligible to a government pension, are the recipients of private pensions in their old age from their comrade, Andrew Carnegie.

Heredity and Eugenics.

Only a misguided enthusiast, says Association would venture to make great claims at the present time for the possible future usefulness of appiled eugenics. The doctrines of There is no doubt that a large Ger- heredity on which the new postulates critical investigation. The limitations of the practical aspects of eugenics must be clearly formulated and emphasized. It is well enough to With the important sections struck | maintain in a general way that vitality is partly inherited and partly ac quired, and that "a sound physical and mental inheritance is a greater asset vantages like wealth." Many individuals, however, have assumed that the new science is primarily intended to foster a scheme of general governmental interference with marriage. As a matter of fact, the most earnest stuhoped to promote the gradual establishment of standards in public opin-

Now We Have It.

The earth passed between the planet Saturn and the sun January 4. It passed between Neptune and the sun January 7. There being no planets in position to force the earth out from the sun and cause cold weather after February 16 these three planets will rather against the sun's repulsion, from February 16 to April 26, which will cause spring to begin practically about February 16, and will cause warmer and drier weather than usual from February 16 to April 26, 1916.

During that warm period the principal cool changes of weather will occur just after the moon or any planets pass between the earth and other The grand jury at Youngstown, O., planets or visible stars near the eclipse. When precipitation occurs it will be near the dates of these planetary, lunar and stellar conjunctions. -D. N. Grover, in Baltimore Sun.

Birds' Nests Cause Fire.

Birds' nests under the roof of a twostory corrugated iron structure at Twentieth street and Sedgley avenue, Philadelphia, caused a fire when they became ignited by sparks from hot sand in a mixer. The roof of the build-

ing was damaged about \$200. Nests are frequently found under the roof and they are destroyed every few days in order to prevent a fire. They were cleaned away recently, but the birds quickly rebuilt them,

### VARIETIES OF STOVES

NATIONS HAVE DIFFERENT METH-ODS OF KEEPING WARM.

Russian Sleeps Over Brick Contrivance in Which Slow Fire Burns-Holland's Heating Arrangement Perhaps Most Economical:

The stove is, comparatively speaking, a new invention. So late as the time of Queen Elizabeth people did not have chimneys; they built their fires in a round hearth in the middle of the room, and when chimneys were introduced, the old-fashioned folk all grumbled, because, they said, smoky air was good for colds. But to the castward stoves of brick and porce lain were commonly used.

A stove made of brick is used in Russia, and in it a slow fire burns all night long. On top of it, when night comes, the peasant and his whole family, in their sheepskins, lie down and go to sleep. It is nice and warm, rather like a window seat that is over a radiator, and sometimes there is a second shelf overhead for any stran;

ger who may be staying overnight. The brick stove of the Russian peasant, in all probability, came overland from China too long ago to talk about, for the Chinese have stoves of brick and clay shaped something like

In Japan there is not much need of keeping warm, but whatever stoves there are in a Japanese home are low, for the life here is all carried on sitting or kneeling on the floor. There is a rough clay stove, made especially for the great rice keille, that costs only a few cents, and when broken the poorest can buy another. There is a dainty little charcoal stove on which the cooking is done, and beside it stands a pretty basket filled with the softest and finest charcoal, There is also a small stove or furnace to heat the water for the bath. And still more odd is the little earthen bedstove, used as we use a hot-water bottle, shaped like a curled-up cat, and it is called "neko" (the kitten).

The German stove of porcelain, with its curious decorations, has figured in many a story of German life. A porcelain stove will hold the heat a long time and keep a room warm with but little attention.

In Holland, where the working people are often at home for a little while at noon, they have the most thrifty arrangement of all-what might be called a portable stove, a stove in an iron bucket. When the children come home from school and the older people from work at noon, instead of lighting the kitchen fire, one of the children takes the fire bucket and trots around the corner to the firewoman's. The bucket is just large enough to hold a piece of burning peat or some live coals, and a teakettle sits on top. The old woman who sells fire and hot water fills the bucket and kettle for a tiny sum, and the child goes home with just enough fire and water enough for the family dinner.

Charcoal is commonly used for cooking in France, Italy and Spain, because it makes a small, hot fire. The Italian keeps warm (or says he does) over a small fire of what we would call an earthen hand-warmer with coals in it, called scaldino. Only within the find rooms that were heated on the American plan anywhere in Europe. The people keep warmer in this country than in any other spot on the surface of the globe in the temperate or frigid zone.

Carbon in Gravity Cells.

Carbon can be used instead of copper in gravity cells with good results. Several carbons should be removed from wornout dry cells, thoroughly cleaned and connected together. After a few hours of short circuit a coating of copper from the copper sulphate solution will form on the carbon surface which will perform the function of the usual copper electrode very well. It must be understood, however, that a loss of efficiency will result, as carbon has much greater re-"Some tourists are a bore, no sistance than copper.-Popular Science Monthly and World's Advance.
